CRUISE LEADERSHIP IN RESPONSIBLE TOURISM

CLIA-member cruise ships and operations become more sustainable and efficient every year

Cruise ships are subject to multiple inspections each year – announced and unannounced – for compliance with strict environmental and safety regulations.

Source: CLIA Environmental Technologies and Practices Report (October 2022) and individual cruise line sustainability reports. Projections are for the CLIA-member cruise line fleet, inclusive of current ships in service plus new ships coming online from the date of this report through 2028, and do not account for vessel retirements during that period. Vessels most likely to be retired first are those without, or unable to be retrofitted with, advanced environmental technologies.
